

Sioux Steel Office Project, Sioux Falls, SD

Submitted by: Limoges Construction

The Sioux Steel Office project stands out for its exceptional use of concrete in creating a structurally sound and aesthetically pleasing building. With a total of 4,800 cubic yards of concrete, the Sioux Steel office is quite the project.

The 11 large pad footings, accounting for over 2,300 cubic yards, showcase the team's expertise in managing substantial quantities of concrete while ensuring the highest level of structural integrity.

The 9-story precast structure, featuring core floors and cast-in-place topping, further highlights the project's innovation and versatility.
